

C Programming - Assignment-03

Q.1 Write a function to implement four function calculator. Function would take operands and operator as arguments and returns result.

Concepts Used

- Functions
 - Function Arguments
 - Return Value
 - Switch Statement
 - Arithmetic Operators
 - User Input / Output
-

Q.2 Write a function to calculate sum and product into a single function and print result in calling function. (Do not use global variables for result)

Concepts Used

- Functions
 - Pointers
 - Call by Address
 - Function Arguments
 - Arithmetic Operators
 - Variables
-

Q.3 Write a function to perform division of two numbers. Return result via out parameter and return value indicates the error (due to zero denominator).

Concepts Used

- Functions
 - Pointers
 - Out Parameters
 - Return Values
 - Conditional Statements (`if`)
 - Error Handling
 - Arithmetic Operators
-
